COURSE DESCRIPTION

Plants have been used for a variety of purposes throughout the history of human existence. Whether it be healing the sick, providing sustenance, or achieving a higher state of consciousness, plants play an important role in how we communicate with the real and spiritual worlds. This course will focus on plants which have been stigmatized by the global west. More specifically, these plants exhibit mind altering properties and are often described as “drugs”. We will investigate the history of these sacred plants, tracing their lineage from their shamanistic roots, to their complex place in the western world.

Additionally, we will investigate other topics that have far reaching political and environmental impacts. We will explore the role that plants and food have on minority communities, and how food scarcity and inequality continues to impact the developed world.

COURSE OBJECTIVES

After successful completion of this course students should be able to:

- Understand origin and cultural significance of sacred plants
- Recognize role of traditional healing
- Develop opinions on complex political and environmental issues
- Describe importance of emerging organic food markets and food accessibility
